* strong small projection from S

31 March 1983. The by Dipterocarp just N of PI #99 has recently dropped a 50cm Diam branch beside it (via crown) & all around this massive branch are new seedlings in profusion - many still in cotyledons, all very light green. We need to come back & mark seedlings here - this B4 must be very recent. We would have seen it the last time we were here (it's Billington & Holgraves' carnival - & it rained). Also a gap - which has a number of seedlings among the heavy debris - some just exploding their bars

P, 36 : B
